

JOEL RIGGING ECHELON COUNTERWEIGHT ASSIST HOIST

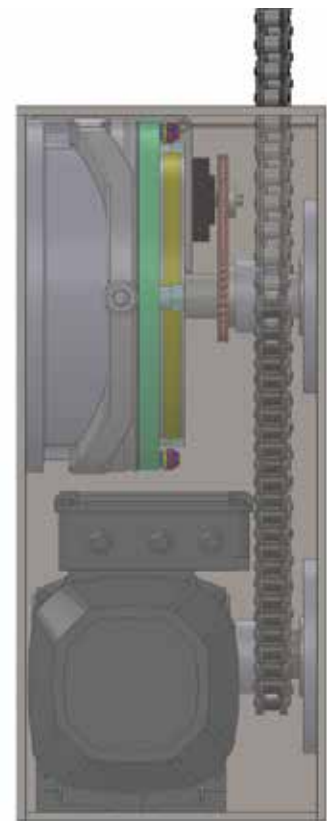

Echelon Assist Hoist

JOEL Rigging's Counterweight assist hoist solves the loading and unloading of counterweights in traditional counterweight rigging systems. With the counterweight assist hoist, technicians do not load/unload counterweights to accommodate different lighting, drapery or scenery.

Integrated into existing counterweight systems, replacing the floor block and operating line. The carriage, head block, loft blocks and batten remain. Heavy duty chain and coated wire rope secure the carriage in a positive loop drive system to control the movement of the carriage and batten.

Counterweight assist hoists have an enclosed body, primary brake with inherently self-locking gear box design, optional secondary holding brake and encoders.

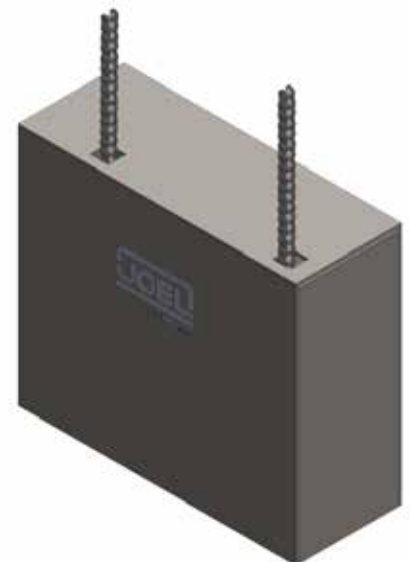

Operator controls for simple up/down jog mode and/or programmable positions and cueing are available.

FRONT VIEW

FEATURES

- Standard line set capacity 2,000 lbs
- Optional secondary holding brake
- Versatile operation on 208, 230, 460 or 600 VAC 3 phase power
- Fixed Speed 25 FPM
- Closed Positive engagement drive loop
- 4 positions rotary limit switch
- Fits into 8" (200 mm) or wider line set center
